/Melvin Curtis Mayes/ Supervisory Patent Examiner, Art Unit 1793			

Continuation of 3. NOTE: Limiting to soldering material to "consisting essentially of" and "1 to 3 wt% Sb" raise new issues that would require further considerations and/or search.

Continuation of 11. does NOT place the application in condition for allowance because: Regarding claim 1, applicant amended claim to further limit the amount of Sb present in the soldering material and added a specific Sb:Bi wt% ratio. This claim raises new issues that would require further consideration and/or search. Further, claim 20 is considered a product by process claim. Clarifiation is needed if applicant is claiming the solder joint final composition or the individual M1 and M2 components. If applicant is claiming the final composition, the individual components M1 and M2 are not taken into consideration. It does not matter how the final composition was made. Only the specific elements of the final composition are taken into consideration. Further, claim 3, 7, 8, 9, 15, 18, 19 raise new issues that would require a new search because these claims are all dependent on claim 1. Claims 21-25 would need clarification if applicant is claiming the final composition or the intermediate M1 and M2 components.
